### Mobile Phone Interface

With the introduction of the NEW Denon DN-F20R solid state recorder for news gathering, a problem arose to quickly return news items to the News Room. We at J.B. Sound Industries, designed this new interface to overcome this problem, below is a picture of our journalist on site sending a report to the News Room.

The Recorder is connected to the interface box held in the right hand, while voice communication is accomplished with an earpiece and lapel microphone. When the news room is ready the journalist switches the switch on the interface box and presses the replay button of the Recorder. The journalist can listen to the playback via the speaker on the recorder to determine when the item is finished, then switch back to voice to speak with the News Room if required.

Whilst sending the recorded item the phone microphone is muted so no other external sounds will interfere with the News item.
