**SS-1 20mm Wide Face Plate.**

SS-1 was designed to provide selectable inputs to our monitor amplifiers.

This unit provides 7 (seven) balanced, stereo, inputs and one balanced, stereo, output.

The seventh input is when all of the six buttons are released, this provides an extra input or allows for cascading any number of SS-1's, providing an unlimited number of **Stereo Balanced Inputs**.

Other uses for this unit are in News Rooms for selecting different inputs for news gathering.

The six switches on each PCB are mechanically interlocked, however the interlocking can not be extended from one PCB to another.

This PCB is a standard Eurocard and matched our other Eurocard PCBs & Modules.

Related product is the SS-6, this is the same six way switch bank, on a small PCB just large enough for the switch bank. Intended to mount inside a console to add OB selection or record selection, to consoles without this function.

**Call J.B. Sound Industries Pty. Ltd to discuss your requirements.**
