

ULTRASONE HFI-650 Trackmaster with S-Logic™

Short description:

Foldable closed, circum-aural studio headphones with **S-Logic™ Natural Surround Sound**

Technical specifications:

S-Logic™ Natural Surround Sound System
Reduced magnetic field emissions
Dynamic principle
Frequency range 15 Hz - 25.000 Hz
Impedance 75 ohms
Sound pressure level 94 dB

Coiled cord, cord length > 3m
Weight 350 g (without cord)
3,5/6,3 mm gold-plated plug

2 year warranty
Long-term availability of replacement parts
German technology

S-Logic™ Natural Surround Sound

Through the S-Logic™ Natural Surround Sound the usual headphone sound will be moved out of the head into the room. The sound is not longer locked in, but seems to be broad and detached. Directions and distances can be heard and perceived - it's just like being in a live concert. For this new technology additional equipment is not required. An ULTRASONE headphone, a simple CD player and you will be ready for the 3-dimensional music enjoyment!

Safe-hearing protection

In addition to this, the HFI-650 Trackmaster is easy on the ears: The S-Logic™ Natural Surround Sound System allows an up to 40% lower dB output (3-4 dB) for the same loudness sensation, thereby the risk of hearing defects may be reduced enormously.

Reduced Magnetic Field Emissions

As all the ULTRASONE products the HFI 650 DVD Edition has a strongly reduced radiation. It is available in two reduction levels: the LE model (= low emission) offers a reduction of up to 60%, the ULE model (=ultra low emission) of up to 95% in comparison to ordinary headphones. These facts are certified by the "TÜV-Süd Deutschland" (Association for Technical Inspection) and IGEF.

Best used for

ULTRASONE's new closed headphone HFI-650 Trackmaster, the successor of the HFI-600, provides an excellent shield to the "outside". The closed construction principle does not affect the tone quality - the HFI-650 Trackmaster headphone is especially suited for professional use in recording studios. Thanks to its closed construction, external noise is suppressed and feedback between microphone and headphone sound reproduction is cut. The user can thereby concentrate exclusively on the transferred music or language he hears. These days, the HFI-650 Trackmaster is also used for games on a PC. Due to customer enquires and requests we implemented an additional function which enables you to fold back the individual earpiece without removing the headphone from your head to be connected immediately with the "outside world" again. Because of this folding mechanism, the headphone can be compactly stored and easily transported in a suitcase.

Let us convince you! Get in contact with the new dimension of "surround sound listening"!
